Research Associate in Protein Expression

OriGene Technologies, Inc.

OriGene is looking for highly motivated and junior level research associate in protein expression. The qualified candidate will work in a team setting to carry out mammalian cell based recombinant protein expression, purification and characterization.

Major Responsibilities:

- Maintains sterile culture of mammalian cells, supports the scalable cultures in flasks or reactors, and performs a variety of experiments in cell growth, transfection, expression validation and productivity assessment.
- Be familiar with molecular biology, transfection and has hands on experience in protein characterization
- Records experiment results in notebooks accurately, clearly and regularly; Prepares summary tables, reports and specification datasheets as needed.
- Maintains laboratory equipment and a safe working environment.

Qualification/requirements:

- BS or MS in biological sciences, or molecular cell biology with at least two years of relevant experience in protein expression and characterization.
- Proficient in aseptic techniques and for mammalian cells, and skilled in protein expression, purification and characterization techniques
- Excellent interpersonal, analytical and technical communication skills
- Strong desires to achieve individual and team goals
