

OriGene Sponsors Ball State in Undergraduate Biology Training

Rockville, MD. June. 29, 2009 - Ball State University Department of Biology offers a [Biotechnology Certificate Program](#) which prepares undergraduate and graduate students with in-demand research and laboratory skills for graduate school or in careers as a research associate. OriGene is a proud sponsor for this program with its [TrueClone cDNA plasmids](#) and expression vectors. Through such research tools, the Biotechnology Program provides hands on experience, enabling students to develop skillfulness in using common lab equipment and learn the underlying theory behind current protocols in able to transfer their knowledge to new scientific questions. Graduates of the Program have been accepted directly into a number of doctoral programs, or hired as research assistants by academic, government, and industrial facilities.

To learn more about the Biotechnology Certificate Program at Ball State and its courses, please contact Sue A. McDowell at samcdowell@bsu.edu.

To learn more about how your academic institute can participate in such academic sponsorship by OriGene, contact Walter Tian, VP Marketing, at wtian@origene.com.
